B.Tech CSE — Artificial Intelligence

PROFESSIONAL SUMMARY

Data Science student with hands-on experience building full-cycle analytical systems, statistical models, and stakeholder dashboards. Skilled in Python, Pandas, Scikit-learn, XGBoost, and Tableau. Delivered a fraud analytics platform on 284,000+ real-world transactions, achieving 97.8% accuracy and reducing false positives by 23%. Experienced in EDA, feature engineering, and translating data insights into business decisions. Seeking a Data Scientist role to extract actionable intelligence from complex datasets.

EDUCATION

BTech — Computer Science Engineering (Artificial Intelligence)

Parul University | 2023 – Present | CGPA: 8.04

EXPERIENCE

Self-Employed | Data & AI Developer

2024 – Present

- Executed full-cycle analytical workflows — from raw data wrangling and EDA to model training and dashboard delivery
- Applied feature engineering: transaction velocity, spending deviation, and class-imbalance correction via SMOTE
- Evaluated models using ROC-AUC, F1-score, precision, and recall; communicated findings through Tableau reports
- Engineered evidence-based recommendation logic serving 50+ location categories with dynamic preference filtering
- Worked with structured and unstructured datasets totaling 290,000+ records using Pandas, NumPy, MySQL, and MongoDB

TECHNICAL SKILLS

Data Science: EDA, Feature Engineering, Statistical Analysis, Data Visualization, Wrangling

Machine Learning: Scikit-learn, XGBoost, Logistic Regression, Random Forest, SMOTE

Visualization: Tableau, MS Excel, Streamlit, Matplotlib, Seaborn

Programming: Python, SQL, JavaScript

Databases: MySQL, MongoDB

AI / NLP: NLP, LangChain, Deep Learning, Computer Vision

Tools: Git, GitHub, Pandas, NumPy, VS Code

PROJECTS

Credit Card Fraud Analytics Platform | Python · Scikit-learn · XGBoost · Tableau · SMOTE | Completed

- Analyzed 284,000+ transactions; uncovered fraud patterns and extracted 10+ predictive features including transaction velocity and spending deviation
- Used SMOTE to correct a 0.17% class imbalance; benchmarked 3 models achieving 97.8% accuracy and 91% recall
- Reduced false positive rate by 23% through ROC-AUC and F1-score-informed model selection and threshold tuning
- Produced an interactive Tableau dashboard with fraud heatmaps, hourly anomaly trends, and card-type risk scorecards

Tourist Guide Recommendation System | Python · Preference Filtering · HTML · CSS · JavaScript | Completed

- Launched an insight-based recommendation engine covering 50+ tourist locations across 3 categories with dynamic preference filtering
- Processed geographic and user-preference data for 200+ unique inputs to generate accurate, personalized suggestions

Gesture-Controlled Drone — System Monitoring | Python · OpenCV · Streamlit · UDP | Completed

- Configured a real-time Streamlit dashboard tracking 10+ system metrics for live node-status monitoring
- Processed continuous sensor and telemetry streams from 5+ nodes to surface fault-detection analytics

CERTIFICATIONS & ACHIEVEMENTS

- Data Science Workshop — Data Cleaning, Preprocessing & Feature Engineering
- Machine Learning Workshop — IIT Bombay Techfest (national-level technical festival)
- Agentic AI Workshop — Advanced AI systems & multi-agent orchestration
- Prompt Engineering — Advanced techniques for large language models
- National-level SIH participant | Greenbottle sustainable product concept presented to industry judges

KEY STRENGTHS

Data Storytelling | Analytical Thinking | Problem Solving | Fast Learning Ability
